

Week 7 – Host your website on GitHub

Student number: 581124

Domain name (URL) of your website on GitHub:

-<https://knockbass.github.io/>

Relevant screenshots + motivation:

The screenshot shows the GitHub Pages dashboard for the repository 'knockbass'. At the top, it says 'GitHub Pages' and describes its purpose: 'GitHub Pages is designed to host your personal, organization, or project pages from a GitHub repository.' Below this, a box displays the message 'Your site is live at <https://knockbass.github.io/>' and 'Last deployed by Knockbass 4 minutes ago'. It includes two buttons: 'Visit site' and 'Unpublish site'. A section titled 'Build and deployment' is visible below.

On the photo you can see that I hosted my website on Github through GitHub Pages. Also it can be seen the URL of my website.

The screenshot shows a web browser window with the address bar containing 'knockbass.github.io'. The page content includes a navigation menu with links for 'home', 'week 1', 'week 2', 'week 3', 'week 4', 'week 5', and 'week 6'. Below the menu, there is a heading 'My hobby is playing basketball' followed by some text and a logo.

The first time when I tried it out was a year ago when I played in a school team
I really enjoyed it and in November I joined the local club in Deventer
So far I like training there and hope to improve as much as I can in future

Here you can see that I am able to access my website through the domain name, and not the IP.

Ready? Save this file and export it as a pdf file with the name: **week7.pdf**
